Grading rubric for Project IV - Data Analysis, checkpoint on 12/9

	Outstanding	Good	Acceptable	Needs work	Inadequate
	5	4	3	2	1
Progress	You are well into the data wrangling process. You have constructed summaries and transformed your dataset to include new useful variables. You are ready to begin exploring the variation and covariation within your data.	You have begun the data wrangling process. You have filtered your dataset into 1-3 smaller subsets for further exploration. You have a clear goal in mind and have started to formulate questions about your dataset.	You are well into the data visualization process. Over 5 plots in your Analysis.Rmd file, done in various geom types, and using different aesthetics.	You have imported your dataset to RStudio and have begun the data visualization process. 1-5 preliminary plots in your Analysis.Rmd file.	You have little to no progress. You have found a good dataset but have not imported it to RStudio.
Organization	You are working inside the .Rproj file and your dataset is inside your working folder. There is extensive use of explanatory comments in code chunks. Variable names are intuitive.		You are working in the .Rproj file. Dataset is inside your working folder. Some code chunks include explanatory comments and some variable names are intuitive.		Your files are very disorganized. You are working on individual files and not inside the provided .Rproj file. The dataset is not inside your working folder. Code chunks are missing explanatory comments. Variable names are not intuitive.
